

## **Occupational Functional Requirements Form**

Below sets out the broad functions of the role for which you are applying which should be considered alongside the Job Description. During the recruitment process, if successful, you will be asked to make a health declaration based on the functional requirements of the role listed below.

As an employer, Health Education England is required to undertake Health Assessments (previously known as pre-placement health assessments). These play an important part in enabling employers to consider an applicant's health, ability, and fitness to perform a particular role.

A Work Health Assessment aims to identify early on whether there are any health conditions or disabilities that may require adjustments in the workplace, to enable the individual to safely carry out the specific duties of the job they are being engaged to undertake. In addition, some health conditions or disabilities may require certain restrictions placed on their role.

Features	Functional Requirement
	•
Regular User of	Our roles generally involve working with computers, using Display
Display Screen	Screen Equipment (monitors, keyboards, and mouse) A self-
Equipment	assessment will be undertaken as part of induction processes
